

MICRODESK™ STRAIGHT SIDES OPTIMISE DESKTOP SIT-TO-STAND WORKSTATIONS

Portable sit-to-stand workstations are very popular, but do their fixed keyboard trays and reduced working area leave enough room for papers and note taking?

MICRODESK™ has developed a solution to this issue with the addition of our Straight Sides, allowing our sturdy writing platform to sit perfectly between the upper and lower surfaces of a split level desk.

An even height at both the front and rear allows the MICRODESK™ to step down onto the keyboard tray, creating a central, elevated writing platform that improves working posture and adds useable desk space whether sitting or standing.

Strong, stable yet lightweight, the MICRODESK™ will ensure you don't compromise on posture when using a portable sit-to-stand workstation.

OR use the Straight Sides on a regular flat desk to provide a lower rear MICRODESK™ height. Great for shorter people with low screens or oversize monitors!
